## Seed Germination Kit Instructions

#4334-0000 (543344)

- Cut a strip of filter paper and thread / loop it through the slot in the plate so that it wicks water from the bottom of the vessel. Be certain the bottom of the strip remains immersed in water.
- Place a 70 mm disc of filter paper over the plate and in touch with the strip. This will become moist from the filter paper strip.
- Place the seeds on the disc.

The cover has a hole in the tip for aeration. It is also transparent and allows observation.
